PROFESSIONAL SUMMARY

Software Engineer with 2+ years of production full-stack development experience across Java SE, JavaScript/TypeScript, Node.js/Express, React.js, and both relational and NoSQL databases (PostgreSQL, Microsoft SQL Server, MongoDB). Strong in the exact fundamentals SAP ABAP on HANA is built on — object-oriented design, relational data modeling with SQL optimization, and REST/service-layer architecture — which map directly to Object-Oriented ABAP, CDS/AMDP, and the RESTful ABAP Programming (RAP) model. Proven collaborator with cross-functional stakeholders (business, clients, leadership) in translating requirements into delivered software across the full SDLC. Actively cross-training into the SAP ABAP on HANA ecosystem and seeking an ABAP developer / trainee role where strong engineering fundamentals and fast ramp-up are valued.

TECHNICAL SKILLS

Languages: Java SE (OOP, Collections, Exception Handling, Interfaces), JavaScript (ES6+), TypeScript, Python, C++, SQL

OOP & Design: Object-Oriented Programming, Interfaces & Inheritance, Design Patterns (MVC, Factory, Singleton), SOLID Principles, Clean & Well-Documented Code

Databases & Data Modeling: PostgreSQL, Microsoft SQL Server, MongoDB, Firebase; relational schema design, SQL query optimization, stored-procedure / database-layer logic

Backend & Services: Node.js, Express.js, REST APIs, service-layer / OData-style design, API integration, Authentication (Firebase, Appwrite, Clerk)

Frontend: React.js, Next.js, React Native, Tailwind CSS, ShadCN UI

SAP ABAP on HANA (Currently Learning): ABAP fundamentals, Object-Oriented ABAP, Core Data Services (CDS) views, AMDP, RESTful ABAP Programming (RAP), code push-down concepts, ABAP Development Tools (ADT) on Eclipse

Testing & Tools: Jest (unit & integration testing), Debugging & Optimization, Git, GitHub, CI/CD, Agile/Scrum, Jira, SDLC, Eclipse IDE, Vercel

HOW MY BACKGROUND MAPS TO SAP ABAP ON HANA

- **Object-Oriented ABAP, Interfaces, OOPs** — 2+ years applying Java SE OOP — classes, interfaces, inheritance, and design patterns — the same paradigm Object-Oriented ABAP is written in.
- **CDS Views & AMDP (code push-down to HANA)** — hands-on relational data modeling and SQL optimization across Microsoft SQL Server and PostgreSQL; comfortable pushing data-intensive logic into the database layer, which is the core principle behind CDS and AMDP.
- **RAP / OData / Web Services** — production experience designing and consuming REST APIs in Node.js/Express — resource modeling, CRUD behavior, and service contracts that the RESTful ABAP Programming model formalizes.
- **Eclipse / HANA Studio platform** — daily work in modern IDEs and Git-based workflows; ABAP Development Tools (ADT) run on the same Eclipse platform.
- **Cross-team collaboration (business, functional, cross-technology)** — documented track record collaborating across clients, developers, and leadership to gather requirements and drive technical solutions to delivery — directly matching the collaboration expectations of this role.

WORK EXPERIENCE

Verity & Proinkfluence IT Solutions Pvt. Ltd. — Associate Team Lead / Full-Stack Developer Jan 2024 – Present | Hybrid, Hyderabad | Team of 8

- Applied object-oriented design — classes, interfaces, inheritance, and patterns (MVC, Factory, Singleton) with SOLID principles — to build reusable, well-documented service layers, the same OOP foundation used in Object-Oriented ABAP.
- Modeled and optimized relational schemas across Microsoft SQL Server and PostgreSQL for structured, transactional datasets; wrote and tuned SQL for performance — the database-layer thinking that underlies CDS views and AMDP.
- Designed and delivered REST APIs and service-layer integrations (Node.js/Express) with authentication and clean contracts — conceptually aligned with OData / RAP service exposure.
- Collaborated with cross-functional stakeholders — clients, developers, and leadership — to gather and analyze business requirements and drive technical solutions across 5 active product deliveries.
- Built unit and integration test coverage for critical services and React components; performed ongoing debugging, troubleshooting, and performance optimization across the SDLC.

- Owned sprint execution, code reviews, and CI/CD releases; mentored 3+ junior developers through code reviews, pair debugging, and OOP walkthroughs, helping 2 reach independent feature ownership within 3 months.
- Authored 3 documentation tracks — API reference, developer onboarding, and internal process docs — ensuring maintainability and knowledge transfer.

PROJECTS

Spaceify_AI — Solo Full-Stack AI Project [GitHub](#) | [Live Demo](#)

Stack: React Router v7, TypeScript, Tailwind CSS, Gemini AI, Bun, serverless (Puter FS / KV / Workers / Auth)

- Built a TypeScript application converting 2D floor plans into photorealistic 3D render outputs using Gemini AI, applying OOP service separation and clean-code principles throughout.
- Architected a 4-stage serverless workflow (upload → AI generation → metadata storage → authenticated access) with before/after previews.

CURRENTLY LEARNING / PROFESSIONAL DEVELOPMENT

- Self-studying SAP ABAP on HANA — Object-Oriented ABAP, CDS views, AMDP, and the RAP model — using the ABAP Development Tools (Eclipse / ADT) on the SAP BTP ABAP environment.
- Building foundational hands-on exercises (CDS view + RAP service) to translate strong full-stack and OOP fundamentals into the SAP stack.

EDUCATION

B.Tech — Artificial Intelligence and Machine Learning | First Class | 2021 – 2024

Institute of Aeronautical Engineering (IARE), Hyderabad

Diploma — Computer Science Engineering | First Class | 2017 – 2020

Jyothismathi Institute of Technology & Science, Karimnagar
